COLOCO
the.colocation.corporation

FULL SERVICE
TELECOM

Coloco offers a wide variety of telecom colocation and service solutions including:

For ISP's

We can be your VoIP gateway, or you can put your modems here. A range of VoIP services is available in a variety of configurations. Your gateway can be colocated here and we can supply your PSTN connection or you can use our gateway services. As an IXC and CLEC, we can provide incoming and outgoing calling, all at full "toll" quality because the SS7 phone switch is here; we are not passing off the call over the Internet to far-flung gateways at variable quality.

Coloco is also the perfect home for your modem equipment, with local incoming calling from Washington, Baltimore and the suburbs. Regional coverage allows you to have a single hub serve the whole area.

For Telco's

We have a full range of wholesale IXC, CLEC and VoIP services. Our SS7 switch is already connected to Washington-Baltimore's important tandems. This means that we can originate local or 1+ traffic and terminate local or long-distance traffic throughout LATA's 236 and 238. Your interconnection with us can be made on PRI's, DTMF, MF, or SS7 trunks. SS7 F-Links are also available, so you can get all of the features of SS7 without having to get expensive STP connections.

For Other Businesses

By using your own colocated VoIP gateway, voicemail system, fax broadcaster, or company dial-up modems at Coloco, you can the have the pricing and variety of service that are only available in the central office of a telephone company.
